### DETAILED ACTION

1. Claims 1 – 22, and 24 are allowed. Claim 23 has been cancelled.

#### *Examiner's Amendment*

2. An examiner's amendment to the record appears below. Should the change and/or additions be unacceptable to the Applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Randol W. Read, Reg. No. 43, 876 on 11 April 2005.

The application has been amended as follows:

In the claims:

On line 9 of **claim 8**, change:

“...the adding step being conducted with a hardware based operation;”

to

“...the adding step being conducted with a hardware based operation autonomously, without firmware interaction;”

***Allowable Subject Matter***

3. Prior art Benkeser et al., U.S. Patent 5,361,362 taken either singly and/or in combination, does not teach or disclose a method as recited in claims 1 – 22, and 24 and the associated apparatus and memory controller with the following features:

Writing an address of a memory location for storing a timestamp corresponding to the beginning of a segment to be executed using firmware; and updating the elapsed segment execution time to memory through hardware based operations *autonomous of firmware interaction*, thus improving the function of recording segment execution time by reducing the overhead of the CPU and the operating system during application execution.

A time stamp assist logic module automatically updating segment execution timestamps to memory *autonomously from the central processing unit*, thus improving the function of recording segment execution time by reducing the overhead of the CPU and the operating system during application execution.

Execute a timestamp update operation to memory corresponding to a segment execution time *without interaction with the operating system*, thus improving the function of recording segment execution time by reducing the overhead of the CPU and the operating system during application execution.

***Conclusion***
